

Characteristics :

Wheel holder made of steel
Used on float lines but mainly used in automotive industry for its precision

Qualities & Dimensions of the wheels :

- Titalix – Diam 5,2 mm & 4,2 mm
- Tantalix - Diam 5,5 mm & 4,2 mm

Thickness of the wheel : 1,06 mm
Boring : 1,42 mm
Axes: 4,2 x 1,39 mm

Advantages :

- Very high precision
- This clip can be used several times after changing the wheel and the axle, which are apart available
- Adopted by the most important manufacturers of cutting wheels

MODIFICATION AND DEVELOPMENT OF PILLARS POSTS
